

## The Right Choice in Rain Check™

With the Rain Bird® Rain Check™ there is no more running out in a middle of a rainstorm to shut off your sprinkler system. The Rain Check automatically monitors your sprinkler system and sends a signal to the main controller to shut-down when it is raining. The Rain Check ensures that your lawn is lush and green by eliminating over-watering during the rainy season. The Rain Check also helps reduce your water bill by preventing unnecessary watering.

### Outstanding Features:

- Adjustable stainless-steel probes can be set to turn off your irrigation system with as little 1/8" of precipitation in the rain collector cup.
- The efficient, hydro-mechanical design automatically returns your sprinkler system to normal once the water in the rain collector cup evaporates.
- Extra-tough UV resistant material resists harsh outdoor conditions and ensures years of trouble-free operation.
- The Rain Check is compatible with all Rain Bird controllers.

For customer information, call 1-800-247-3782 (U.S. only).
